SUMMARY

Full Stack Intern at True Value Infosoft, building and testing APIs in Next.js, Node.js and MongoDB. Third-year B.Tech CSE student with projects covering payments, auth and Claude API features. Looking for a Software Engineering or Full-Stack internship where I can ship features on a team.

EXPERIENCE

Full Stack Intern, True Value Infosoft — Sep 2026 to Present

- Building a property listing platform (public website and admin dashboard) in Next.js, Express and MongoDB. Pre-launch company project, code is private.
- Built the REST API behind it: search and BHK filters, saved listings, reports, articles and a contact form, with automated tests across auth, listings, reports and import.
- Built secure login: JWT with refresh-token rotation, session revocation on logout, email verification and OTP password reset.
- Added an admin review step that blocks approval without a description and 5 photos, and an import API for scraped listings, with the data contract agreed with the teammate building the scraper.
- Resolved 8 mentor code review items, including rate limiting, image URL validation and unified error responses.

PROJECTS

Source code for all projects: github.com/lost-user-23

Lost & Found Portal | FastAPI, React, Claude API, Cloudinary, Resend

- Built a full-stack lost & found portal with FastAPI and React, with JWT role-based authentication and an admin dashboard.
- Used the Claude API to match items by meaning instead of exact keywords, so a report of a "Black Nike bag" can match a "Dark Sports bag" with a match percentage.

Event Booking Platform | Next.js, MongoDB, NextAuth, Stripe, Resend

- Built an end-to-end event booking app in Next.js with NextAuth session management and MongoDB storage.
- Added seat capacity limits and RSVPs, with an automated waitlist that gives a cancelled seat to the next person in the queue.
- Built a Stripe webhook handler that confirms payments and sends transactional emails through Resend.

Stitch Design Automation Tool | Node.js, Express, Puppeteer, Claude API

- Built an automation pipeline in Node.js and Express that uses the Claude API to turn product ideas into structured UI generation prompts.
- Wrote a Puppeteer agent that submits the prompt to Google’s Stitch, waits for the build and saves the rendered designs, so an idea becomes UI mockups with no manual steps.

SKILLS

Languages: Python, JavaScript
Front-end: HTML, CSS, React.js, Next.js, Tailwind CSS
Back-end: Node.js, Express.js, FastAPI, REST APIs, JWT, NextAuth
Databases: MongoDB, SQL (MySQL)
Tools & APIs: Git, GitHub, Stripe, Resend, Cloudinary, Puppeteer, Claude Code, Copilot

EDUCATION

B.Tech in Computer Science and Engineering, JECRC University, Jaipur | CGPA: 8.35/10 — 2024 to 2028
Coursework: Data Structures & Algorithms, Computer Networks, Object-Oriented Programming, Operating Systems, DBMS

ACHIEVEMENTS

- 3-time medalist at the National Level Karate Championship; multiple medals at State and District level.
